ACTION	YES	NO	N/A	COMMENTS
Study plans, proposal, and the project site to determine the location of all wells to be sealed. Wells are to be sealed prior to clearing and grubbing the site.				
Has the well been checked for obstructions that would prevent a complete filling of the well?				
Are the personnel sealing the well certified by NCDENR?				
Has water been disinfected?				
Has elevation of consolidated rock been determined?				
Has well abandonment record been obtained from the Contractor within the 30 day time period?				
Has each sealed well been recorded in a Pay Record Book?
